No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Methods are provided for large-scale purification of accompanies, including mature BNNF, suitable for clinical use. A CC claimed method comprises: (1) separating the neurotrophin from the cother proteins using a hydrophobic interaction chromatography resin (HICR); and optionally (2) separating the neurotrophin from a CC chemical variant by high performance cation exchange chromatography CC (HPCEC). The processes can also be used for purification of e.g. CC chaman nerve growth factor (NGF) (see AAM48886), mouse NGF (see CC AAM48889). The processes allow separation of neurotrophin-3 (see CC AAM48889). The processes allow separation of neurotrophins from CC various undesirable misprocessed, misfolded, size, glycosylated or C charge forms. They allow selective separation from variants and CO ther molecules, and from other polypeptides with high pi. The Sources, including fermentation broths or lysed bacterial or C charge forms. The growth to starting materials from various sources, including fermentation broths or lysed bacterial or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
